

Rewrite Your Life — Instrument

Version v1 — Frozen 2026-09-07

Prepared by Frances Mendoza — Growth Impact Group

Companion file: RYL_instrument_v1_2026-09-07.csv

This is the human-readable master record of the Rewrite Your Life assessment: every question exactly as it appears on screen, the answer scales, which items are reverse-scored, and how each domain is calculated. This is the file to open years from now to check what was actually asked and how a number was produced.

This wording is frozen

Every question below has been asked to real participants and is locked as-is. If a future version changes any wording, it becomes a new version (v2, v3, ...) alongside this file — this file itself is never edited after today's date.

1. Answer Scales

Every question uses one of two identical five-button scales. The number shown is the raw score that button contributes.

Frequency scale — items 1–21

- 0 Not me at all
- 3 Occasionally
- 5 About half the time
- 8 Most of the time
- 10 Consistently – it's how I operate

AI-use scale — items 22–27

- 0 Never
- 3 Tried it
- 5 Sometimes
- 8 Regularly – part of how I work
- 10 It's simply how I work

2. All 27 Questions

Grouped by domain, in on-screen order. “R” marks a reverse-scored item (10 - answer at scoring time; the question and buttons look identical on screen).

Clear Thinking

1. Can you clearly see your options when you have a big decision to make?

like choosing between a job with better pay or one with more flexibility

scale: frequency

2. Does your thinking stay organized when you're under time pressure?

a deadline crunch where your to-do list still makes sense

scale: frequency

Emotional Steadiness

3. When someone's upset with you, do you stay curious about why instead of getting defensive?

asking “what happened?” instead of “that’s not fair”

scale: frequency

4. Do you pause before acting on a strong emotional reaction?

a breath before firing back a reply

scale: frequency

Adversity Recovery

5. When something goes badly wrong, are you back to functioning that same day?

a bad meeting doesn’t take you out for the rest of the week

scale: frequency

6. After a rejection or failure, do you recover your motivation quickly?

a “no” doesn’t stop you from trying again soon after

scale: frequency

Frame Control

7. In a tense conversation, do you set the tone instead of absorbing the other person's?

staying steady even when they're heated

scale: frequency

8. [R] Do you ever leave a conversation realizing you agreed to something you didn't actually want?

saying yes just to end an uncomfortable back-and-forth

scale: frequency

Learning Agility

9. When new information contradicts what you believed, do you update your view quickly?

changing your plan once the data proves you wrong

scale: frequency

10. When your usual approach stops working, do you switch tactics quickly?

trying something new instead of repeating what isn't working

scale: frequency

Situational Awareness

11. Walking into a room, can you quickly read who's friendly, neutral, or against you?

sensing the room before anyone says a word

scale: frequency

12. Do you tend to see problems coming before they actually arrive?

spotting a risk before it becomes a crisis

scale: frequency

Presence

13. In high-stress moments, do you stay calm enough that others look to you for direction?
being the steady one when everyone else is panicking
scale: frequency

14. **[RY]** When pressure suddenly spikes, do others notice you visibly lose your composure?
your voice, face, or hands giving it away
scale: frequency

Purpose

15. Do your daily actions actually line up with what you say matters most to you?
your calendar reflecting your stated priorities
scale: frequency
16. Does a clear sense of purpose guide your big decisions?
choosing a path because it fits your bigger why, not just what's easiest
scale: frequency

Execution

17. Do you finish what you start, even after the initial excitement wears off?
still showing up once the novelty fades
scale: frequency
18. Do you close loops quickly, or do things linger half-done for weeks?
that email that's been "almost done" for a month
scale: frequency

Life Anchors

19. Overall, how satisfied are you with your life right now?
thinking about work, relationships, and health together
scale: frequency
20. Out of the last 14 mornings, how many did you wake up already knowing your top priority for the day?
(10 = 14 of 14)
scale: frequency
21. How confident are you that the next 12 months are headed where you want them to go?
scale: frequency

AI Orchestration Index

22. Q-AI: Do you hand real work to AI and direct it like a team member, not just ask it questions?
assigning it a task with a goal, not a one-off question
scale: ai-use
23. Can you tell when to trust an AI's output and when you need to verify it yourself?
double-checking a number before you use it, not everything
scale: ai-use
24. Do you use AI weekly in your actual work, not just to experiment with it?
scale: ai-use
25. Does AI genuinely save you time and effort, or does keeping up with it cost you more than it gives back?
fewer hours spent vs. more prompts, tools, and outputs to check
scale: ai-use
26. Do you give AI clear roles, standards, and review — the way you'd manage a team?
defining what "good" looks like before it starts
scale: ai-use

- 27.** Are you keeping pace with how fast AI is changing, or falling behind?
trying new tools or models as they come out, vs. still using what you learned a year ago
scale: ai-use

3. How Each Domain Is Calculated

All domain and index scores use POMP scoring (Percentage of Maximum Possible) — the sum of the relevant raw answers, divided by the maximum possible sum, times 100, rounded to a whole number. Reverse-scored items are converted to (10 - answer) before summing.

Clear Thinking

$$(\text{item 1} + \text{item 2}) / 20 \times 100$$

Emotional Steadiness

$$(\text{item 3} + \text{item 4}) / 20 \times 100$$

Adversity Recovery

$$(\text{item 5} + \text{item 6}) / 20 \times 100$$

Frame Control

$$(\text{item 7} + (10 - \text{item 8})) / 20 \times 100 \quad - \text{item 8 reversed}$$

Learning Agility

$$(\text{item 9} + \text{item 10}) / 20 \times 100$$

Situational Awareness

$$(\text{item 11} + \text{item 12}) / 20 \times 100$$

Presence

$$(\text{item 13} + (10 - \text{item 14})) / 20 \times 100 \quad - \text{item 14 reversed}$$

Purpose

$$(\text{item 15} + \text{item 16}) / 20 \times 100$$

Execution

$$(\text{item 17} + \text{item 18}) / 20 \times 100$$

AI Orchestration Index

$$(\text{item 22} + \text{item 23} + \text{item 24} + \text{item 25} + \text{item 26} + \text{item 27}) / 60 \times 100$$

Q-AI (its own row)

$$\text{item 22} / 10 \times 100 \quad - \text{item 22 alone, not part of a domain}$$

Life Anchors (items 19, 20, 21)

Not combined into a domain percentage. Each is shown individually on its original 0–10 raw scale — deliberately never converted to a percentage.

Straight-line / careless-response flag

A row is flagged (not dropped) when 10 or more consecutive answers are identical AND that run spans at least one of the two reverse-scored items (8 or 14) — a genuine respondent adjusts on a reverse item, so a run through it that doesn't is a strong signal of a straight-lined response. Flagged rows are excluded from cross-participant aggregate rollups only; a person's own results screen is never affected by this flag.
